ERCSYS

THE EVENT RESOURCE COSTING SYSTEM FOR MICROSOFT WINDOWS

This leaflet describes the key features of ERCSYS, the Event Resource Costing System which helps businesses involved in providing chargeable services and goods to event organisers, to book, cost and charge for their services.

ERCSYS is a Microsoft Windows XP to Win10 compatible product, running either on a standalone PC or on a network. Any PC built within the last 10 years should be capable of running ERCSys .

ERCSYS is built for MS-Access 2003 onwards , although no particular knowledge of Access is required, as all functions are available by clicking buttons, and selecting from lists of data and options..

ERCSYS can model virtually all of the details of your Event Resourcing business, including your personnel, and physical goods and services. Although not strictly an accounting system, many financial functions are provided for fully detailed costing, estimating and invoice production.

ERCSYS uses user-defined codes extensively so that you can be sure that your business can be flexibly represented in the system.

A special ERC-SYS WEB MODULE can run on your intranet (Windows) server and allow local or remote viewing of Event and Resource Bookings and other details.

To find out more about this useful product, and to see how you might use it in your business, read on ...
