JISYS

THE JOURNAL INDEXING SYSTEM FOR MICROSOFT WINDOWS

This leaflet describes the key features of JISYS, the Journal Indexing System, which is designed to allow you to create and subsequently search, a computer-based index all kinds of reference material: journal articles, books, circulars, reports, theses, regulations and other "grey literature".

JISYS is a Microsoft Windows (**32-bit versions only** at present, from Windows XP to Win10) compatible product, running either on a standalone PC or on a network. The minimum requirements to run JISYS are such that almost any PC sold in the last 10 years will be sufficient.

JISYS for Windows builds on the functionality of our MS-DOS based indexing product which has been in use in hundreds of organisations since 1985.

If your work involves information; as a lecturer, teacher, lawyer, doctor, or other professional, then JISYS is just what you need. JISYS is easy to use, easy to manage, and easy to search, and can also print a complete cross-referenced catalogue of your indexed items, for offline searching and browsing.

A simple to use, but powerful Windows interface provides all the information you need by pressing buttons and picking from lists.

To find out more about this useful product and to see how you might use it in your business, read on

JISYS: An Outline

JISYS stores the following user-definable types of information:

- Journal Names** a list of publication titles (journals) or information sources (circulars and book publishers) which you wish to index. Up to 250 definable, each can be used any number of times
- Keywords** a dictionary of terms and phrases which you wish to use to locate your articles stored in the system. Up to 990 definable, each can be used any number of times
- Authors** up to 10,000 authors, each can be used any number of times
- Articles** up to 10,000 articles can be entered, the details held on each are:
 Journal Name or Circular/Book Publisher
 Article Title Notes Date (month and year)
 Author(s) up to 3 Keyword(s) up to 8

JISYS can be searched by Journal name, Author, and Keywords, and data output to a file, printer or to the Windows clipboard for word processing.
 A fully cross-referenced catalogue can also be printed for offline browsing.

JISYS Order Form

Please send _____ copy/ies of the Journal Indexing System for MS-Windows.
